Officials	Dr. Mohamad Awad
Awareness & Guidance	The presence of instructions for correct use & instructions to maintain laboratory equipment,

Internet of Things (IoT) Lab was established in cooperation with the international company Siemen in the Department of Computer Engineering - College of Engineering and Petroleum - Kuwait University. This lab facilitates students' learning in various fields like IoT engineering, algorithm development, machine learning, & data analytics. Thus, preparing graduate computer engineers to contribute to building a new Kuwait. This laboratory is unavailable in any other local educational institution or research institute in Kuwait. The laboratory consists of miniature models of oil well-drilling machine factories, parts of modern cities, and cloud computing programs. The student can design algorithms and computer programs to collect data and information about available models and make the appropriate decisions to improve their performance. For example, it can create algorithms to measure the extent of traffic and control a set of traffic lights to reduce traffic congestion. The student can also develop algorithms to monitor the status of oil well drilling machines and predict malfunctions. It is also possible to build a model of a small factory and control it. All experiments proposed in this laboratory facilitate teaching core and elective subjects in the Computer Engineering program at the College of Engineering and Petroleum at Kuwait University.

تم انشاء مختبر انترنت الأشياء بالتعاون مع شركة سيمنز العالمية، يسهل هذا المختبر تعلم الطلاب هندسة إنترنت الأشياء وتطوير الخوارزميات والتعلم الآلي وتحليلات البيانات. لا يتوفر هذا المختبر في أي مؤسسة تعليمية محلية أخرى أو أي معهد بحثي في الكويت. يتكون المختبر من نماذج صغيرة لمصانع آلات حفر آبار بترول وأجزاء من مدن حديثة بالإضافة إلى برامج حوسبة سحابية. يستطيع الطالب تصميم خوارزميات وبرامج حاسوب لجمع البيانات والمعلومات الخاصة بالنماذج المتوفرة واخذ القرار المناسب لتحسين أدائها. مثلاً على ذلك، يستطيع تصميم خوارزميات لقياس مدى الحركة المرورية والتحكم بمجموعة إشارات ضوئية بهدف تخفيف زحمة السير. كما يستطيع الطالب تصميم خوارزميات لمتابعة حالة آلات حفر الآبار النفطية وتوقع الأعطال. كما يمكن بناء نموذج لمصنع صغير والتحكم به. إن جميع التجارب المقترحة في هذا المختبر تدعم التدريس في المواد الأساسية والاختيارية في برنامج هندسة الكمبيوتر في كلية الهندسة والبتترول في جامعة الكويت.
